## Key Advantages

- Suitable for new and existing homes
- No crane or removal of roof required for installation
- Ultra energy efficient, low power AC motor
- VVVF drive for super smooth and quiet operation
- UPS battery operation with complete functionality in the event of a power outage
- Non hydraulic, oil-free drive system
- 100mm pit depth
- 240 volt single phase power
- No machine room, no large cabinet to hide
- Wide range of high quality finishes including steel skin-plate, laminate, stainless steel or glass
- Multiple door and entry configurations
- Italian designed, engineered and manufactured to Australian standards

## FAQs

- Q. Where are your lifts manufactured?**  
**A.** The Genius lift is designed and manufactured in Milan, Italy.
- Q. Who does your installation and service work?**  
**A.** JPS employs a comprehensive, professional team of installation mechanics and service technicians.
- Q. Do I need any engineered structural walls to support the lift?**  
**A.** No, JPS use an engineered steel skeletal structure to support all the lift equipment within the shaft space.
- Q. So the Genius is not a hydraulic lift, what does this mean?**  
**A.** The Genius 300 and 450 design is based on the concept of everyday office lifts, using an electric motor, belts and a counterweight. This makes the Genius lift energy efficient, easy to install and gives it a very long life, due to the traditional, yet modern design.
- Q. When do you normally install the lift?**  
**A.** There is no need to leave the roof off to install the lift with a crane, we install each pre-fabricated section, piece by piece. The best time is once the house has reached lock up stage and has safe stair access to all floors.
